## Monday 8th July, 6.00pm

**Destellos (Sparkle) (5'37)**

***Elsa Justel.***

*As in a reverie, the objects separate from their sense to become poetry.*

The idea of the project is to give life to the sparkle in different materials. Metal, glasses, ice, will travel in time and space by means of computer animation. There is also a play with sensations of fragility and transparency. The music plays the same notions by using recorded sounds of the same materials. In fact, the discourse is lead by the music which guides the time development and underlines the sense of colour.

*(Argentine-1944) Living in France since 1988. She studied composition and electroacoustics in Buenos Aires, then she had her Doctor degree in Computer music at the University of Paris. She taught Avant-garde music at the Conservatory of Mar del Plata, since 1980.*

*She has received composition awards such as: Prix Ars Electronica, Linz, Austria (1992, by "Fy-Mor" computer music), Stipendienpreis of Darmstadt, Germany (1990), International electroacoustic competition of Bourges, France (1989, by "Ichihualasto", electroacoustic), Tribuna de Música electroacústica de Argentina (1996, by " Fy Mor " for tape) and Tribuna Nacional de compositores of Argentina (1987, by "Abismos" for voice and live electronics).*

*Major international festivals which have included performances of her works are the ICMC, in Montreal (Canada-91), San José, California (United States-92), The Banff Centre (Canada-95), Hong Kong (96), Thessaloniki (Creece-97), Festival Synthese of Bourges (France-90-95-96), Ferienkurse für neue musik, Darmstadt (Germany-90-92), Elektronischer Frühling, Vienna (Austria-94), New Music Festival (Denmark-92), ENSEMS Festival of contemporary music (Valencia, Spain-96), XIII Settimana per i beni musicali, Bologna (Italy-92), Festival of electroacoustic music of Bogotà (Colombia), as well as concerts and broadcasts in United States, Europe, Canada, Australia and latinamerican countries.*

*Between the commissions and grants she was asked the composition of electroacoustic pieces in France (" Feuillage de Silence " for flute, oboe and electronics-GRM, Paris / "Veras llorar la Biblia" for tape-GES, Vierzon / "Le jardin de nuages" for tape-GMEB, Bourges / " ALL+ " for double bass and electronics-Mixture, Paris:"Alba Su", IMEB, Bourges/"Mâts" INA-GRM, Paris/"El tercer fuego" Radio France, Paris), in Austria ("Sikxo" for saxophone and tape - Elektronik Musik studio of the Hochschule of Viena), in Belgium ("La ventana deshabitada" for harpsichord and tape - IPEM, Gent/ "Pieza en forma de té" electroacoustic, Musiques et Recherches, Ohain), and in Spain ("Latido Estival" for voice and tape -LIEM, Madrid / " La ilusion sensible " audiovisual -Universitat Pompeu Fabra, Barcelona/"Midi de Sable" Studio Phonos, Barcelone), in Germany (" Au Loin...bleu " for tape - Exposition " Multilinear " Hannover).*

*Works recorded by: J&W-Canada, CD931 ("La ventana deshabitada" for harpsichord and tape); ICMC '96, Hong Kong ("Haricots et petits bâtons" for tape); Diffusion i Media, Canada, IMED 9837 ("Chi-pa-boo" for tape); 00Discs, USA, 0045 ("Fy Mor" for tape); Acousmatica, France, CD1200 ("Mâts" for tape); Organised Sound Vol. 3, Cambridge University Press, ("Au loin... bleu" for tape), Computer Music Journal, Vol.25-N°4,2001 ("Alba Sud" for tape)*

**Some Quiet Graveyard (11'45")**

*Ian Fredericks*

Some Quiet Graveyard was inspired by thoughts of the awesomeness of the universe. Hanging raggedly off an insignificant star in a minor galaxy somewhere on the outskirts of the universe is a minor planet which on a cosmic time scale can at best be considered 'some quiet graveyard'":

Beyond the moon

Beyond the darkness

Starkness

One small cloud of dust

Just

Some Quiet Graveyard

Beyond the speed of light.

"The piece Some Quiet Graveyard, which was the first piece where I really consciously set out to map a visual thing to a musical thing, didn't really start until 1983. We were just starting to be able to do meaningful computer based sound synthesis without having access to large and expensive computer installations. Some Quiet Graveyard was done with

an instrument I built using an Apple 2 computer. It was performed in a watt concert at the downstairs theatre in the Seymour Centre. For the watt concerts in those days, the downstairs theatre would be booked for a week. There would be a massive amount of audio equipment. We'd spend two days setting up the gear and then have two days for rehearsals and then have performances between the Thursday and Saturday evenings."

"For the performance of Some Quiet Graveyard there was a four track recording performed using a four channel desk. The way the piece was realised musically was with this instrument I built, as I said, in an Apple 2 computer running a sound board called a Mountain Valley Sound Card. I built some control devices for this one of which used a foot pedal to control the volume envelope. There was a drumming percussive aspect of the piece performed by tapping my other foot and a joystick was used to control the timbre and the distance fader device I had built. I then had to spend a number of weeks learning how to play it. It ended up being very expressive in terms of its sound synthesis techniques. It would have been too messy to perform live. Anyway there were a number of parts. There were four or five percussive parts and two lead type parts."

Ian Fredericks has played a prominent role in the development of Australian electronic music and mixed media composition since the mid-1970's. By establishing both the SEUSS electronic music studio at Sydney University in the early seventies, and the computer music and audio-visual composition and performance group watt with Martin Wesley-Smith in 1976, Ian helped pave the way for the generations of artists that have since explored this field.

These notes and bio are sourced from:

**Andrew D. Lyons, Chroma 26-27**

***True Nature (7'00")***

***James Croson - music***

***Thawatpong Tangsajjapoj - animation***

"True Nature" is an animation produced on computer. An artist living in the square-cornered/straight-lined world of the "golden section village" uses his drawing tools to design a cart and begins a journey. An accident leads him to a woman in a cottage in the woods who gives him a brush, with which he remakes his world with curves, enriching the village with a more organic nature.

The music was likewise realised on computer. Picking up on the golden section reference in the film, the music uses a scale based on ratios of phi. (The scene at the cottage and the fantasy sequence following are in equal temperament.) Many thanks to Norm Carey at the Eastman School of Music for discussion on the fancy scale. A few samples are used for sound effects, but all of the music employs instruments modelled in Csound and LORIS.

*Thawatpong Tangsajjapoj (also known as Pop) was engaged in architecture for eight years before turning to animation. He has produced three short films, and recently earned the MFA degree from the Rochester Institute of Technology, School of Film and Animation. Thawatpong lives in Bangkok, Thailand.*

*James Croson was born in El Paso, Texas. He has composed, performed, and recorded jazz in Columbus and Boston, and has degrees from the Eastman School of Music and the Ohio State University. His most recent efforts have been electro-acoustic music compositions and soundtracks for short films and animations. His "Aerial Displays" earned honorable mention at the Stockholm Electronic Arts Awards competition in 1998. Jim is pursuing a doctorate in composition at the Ohio State University, and lives in Mount Dora, Florida.*

**Continuity 3 (15'00") – world premier**

***Paul Doornbusch – composer & processing***

***Timothy Phillips - percussion***

Continuity 3 has as its unifying theme concerns of fragmentation and continuity. Many of our experiences may be continuous, for example time, light and so on, but they may in fact be fragmented such as memories, or described as particles such as light. This duality and tension of opposed structures is explored in Continuity 3. The instrumentation produces both musically "pure" and fragmented sounds, from the plate and chinese cymbal respectively. The electronics is entirely processing of these sounds, and either makes them more continuous or fragmented. For example, resynthesised overtones from an instrument might hold for a long time or they might rapidly change pitch and timbre. The overall structure starts with continuous sounds quickly fragmenting and slowly coming to a continuous and unified section. This becomes excited and fragmented by the electronics and eventually bursts into a frenzy of activity. The process continues with variations before the ending which presents these opposing elements again.

Born in Melbourne Australia, Paul Doornbusch is a composer, sonologist, and occasional performer who works largely with algorithmic composition systems for traditional instruments and electronics. His work is presented internationally in concerts throughout Europe (Paris, Amsterdam, The Hague, Frankfurt, Köln, Berlin, Salzburg, etc.) and also in Australasia, Canada and the USA. His recent works include Continuity 3 for percussion and computer and Continuity 2 for electronics and bass recorders (premiered Salzburg festival 1999). Doornbusch's music is concerned with rich textures and elaborate but transparent musical structures that probe the extremes at every level for the performer and listener. Currently working at RMITs Interactive Information Institute, Doornbusch is involved with music and sound in technological and Virtual Reality contexts.

*Timothy Phillips is one of Australia's most versatile young percussionists, having forged a career both here and in Germany playing in orchestras, new music ensembles and as a soloist and chamber musician. He has appeared at the London Proms, Edinburgh Festival, Salzburg Festspiele with groups such as Ensemble Modern, the Ensemble Modern Orchestra, KLangforum Vienna and World Brass. Currently based in Melbourne he performs with the Melbourne Symphony, Libra Ensemble and Astra Chamber Music Society.*

**Heisenberg (9'00")**

*Andrew Lyons*

*Heisenberg* is a synthesized, abstract spatial audio-visual artwork intended for DVD performance. The design of *Heisenberg* draws on a body of research concerning the nature of synaesthesia and mental imagery resulting from musical stimuli. In creating *Heisenberg*, the Houdini 3D animation software was used to complete much of the audio composition as well as the animation. *Heisenberg* also made use of a unique 3D sound spatialisation system involving an interface between the Houdini 3D software and Csound. *Heisenberg* might be described as a digitally landscaped garden of unearthly delights.

*Andrew Lyons began his music career as a Saxophonist playing in Melbourne's inner city hotels during the late 1980's. During this period, a broad range of musical influences included experimental electronic music performed on the 3RRR radio station. Following a brief period at Latrobe University in 1989, Andrew spent two years experimenting with electronic music and studio techniques at Collingwood Tafe, and another two years studying composition at the University of New England, Northern Rivers. Upon graduating in 1995, Andrew returned to Melbourne and commenced employment in the Film and Television post-production industry as a 3D animator. He continued in this line of work in Sydney from 1996 until commencing a PhD at the Sydney Conservatorium of Music in 1998. Andrew's research concerns the composition of virtual worlds involving the visual representation of synthesized 3D sound using 3D animation tools. Andrew is currently a Visiting Research Fellow at Southern Cross University in Lismore.*

**∞±∞**

*Jeremy Yuille*

∞±∞ has two stages; the first requiring access to the digital source of works accepted to be played at the venue/festival/concert in which ∞±∞ is performed. The works are sampled, and manipulated during the course of the event in which they themselves are performed. This provides the context in which to place the work.

The second stage involves a performance using only the sounds harvested and cultured in stage1. The performance finishes with the only version of the "original" samples being systematically eroded and finally destroyed. There will never be a second performance with the same source.

∞±∞ addresses issues of authorship and origin, individuality and creativity. Issues present in many fields where the media of choice has become 1 and zero

**Tantric Transformation 2000 (25'00")**

***Gerard Pape***

This work is based on a short sequence of Tibetan music thoroughly transformed in various ways by the computer. The work is a sound ritual composed as very thick spatial music in 8 channels of sound (using 4 slightly desynchronized CD players) with live remixing done in concert. Each of the 4 CDs represents one dimension of the whole musical space that is projected into a distinct stereo diagonal in the concert space: front center-back center, rightcenter leftcenter,leftrear-rightfront and leftfront-rightrear. The computer-generated video of Anney Bonney is a visual analog to the sound, not in the sense of illustrating the music, but rather as a perceptual counterpoint to the music--that is, the images work with similar types of rhythms and textures as their equivalents in sound.

*Gerard Pape was born in Brooklyn, New York in 1955. He graduated with a B.A. in Psychology from Columbia University in 1976, while simultaneously beginning private composition lessons with David Winkler. He obtained a Ph.D. in Clinical Psychology in 1982 from the University of Michigan, and continued private composition lessons with U-M music composition faculty members George Cacioppo and William Albright. Pape studied electronic music with George Wilson in the analog and digital studios of the University of Michigan.*

*Pape has composed more than 50 works for orchestra, chamber music, and electronic works for instruments, voice and/or tape. His music has been performed in numerous festivals in the USA, Canada, France, Italy, Germany, Spain, Austria, Greece, Roumania, Sweden, Australia, Mexico, Hong Kong and Japan and was presented in the International Computer Music Conference (ICMC) in Tokyo in 1993 and in Hong Kong in 1996. He has been granted ASCAP standard awards each year from 1992 through 2002.*

*Among his most important compositions is the work "Feu Toujours Vivant" for large orchestra and 4 sampler keyboards, commissioned by the electronic ensemble Art Zoyd and the National Orchestra of Lille, conducted by Jean-Claude Casadesus. After its world premiere in Lille, March 9, 1997, the work was replayed twice more, including in Paris.*

*Pape has written numerous psychoanalytic articles. A book of his literary works, including short stories, plays and poetry, was published in the USA in 1984. More recently, he has published articles on musical complexity, and on the music of Luigi Nono (published in Contemporary Music Review). He has written and lectured extensively on the subject of "Composing in the Continuum" and is currently editing a book on this subject called "Le Continuum" due out fall 2002 in Paris. He has recently published an article "Iannis Xenakis and the Real of Musical Composition" in the Computer Music Journal.*

*His discography consists of a monographic disc released in 1992 by Mode, including works played by the Arditti Quartet, the Prism Orchestra of New York, and William Albright. In September 1998, Mode released a second disc of Pape's work, performed by Arditti Quartet, Ensemble 2E2M, Ensemble Voxnova, saxophonist Daniel Kientzy, singer Nicholas Isherwood, Janet Pape, and flutist Cécile Daroux. Mode recently released a double cd anthology called "CCMIX Paris: Xenakis/UPIC/Continuum" that contains Pape's "Le Fleuve du Desir III" for string quartet and tape, as played by the Arditti Quartet.*

*Pape is working on an operatic project based on Antonin Artaud's play "The Cenci" and which involves a collaboration with the actor-director Michel de Maulne and his theater "Maison de la Poésie" located in Paris.*

*One of his most recent works "The Ecstasy of St. Theresa" for 9 singers and live electronics, commissioned by the Donaueschingen Festival, will be premiered in October 2002 in Germany by the reknown vocal ensemble "Neue Vocalsolisten Stuttgart". A monographic concert of Pape's 3 string quartets as well as the world premieres of his "Le Fleuve du Désir IV" for violin and tape and "La Naissance du Son" for solo cello, will be played by the Arditti String Quartet at the Texas Eye and Ear Festival in Austin in September 2002.*

*Pape has directed Les Ateliers UPIC, recently renamed CCMIX (Center for the Composition of Music Iannis Xenakis) since 1991. This organisation is a computer music center located in Paris. Besides being a composer and director, he is a practicing Lacanian psychoanalyst.*

*Anney Bonney is a multimedia artist who's lived in Lower Manhattan for the last 27 years. Former contributing arts editor for Bomb Magazine, Co Founder/Director of Antenna TV, Performance/Video Curator and Media Director at the Kitchen, she presently teaches Video Art in the Art and Design Department of Purchase College in Westchester County, New York. Her early experimental films were shown in downtown clubs and more traditional venues like the Ford Foundation and the Brooklyn Museum. Last summer she presented an interactive (collaboration with Liz Phillips)sound and video installation (Shaded Bandwidths) at the Anchorage in Brooklyn a in Brazil, Japan, Germany, France, Italy, Turkey, England, and the Netherlands. This is her first time showing work in Australia. She only wishes she were there...Someday...*
