Abstract

At the Illawarra Institute of TAFE, under the leadership of head teacher Michael Barkl, we have set up a series of computer labs and teaching facilities for music technology that allows us to teach a wide variety of computer music skills in a number of contexts. A professional recording studio environment allows us to teach traditional multi-track recording skills, while a series of individual recording rooms allows students to work on individual projects. Portable recording equipment allows students to record both concerts and environmental sounds. A lab with 19 computers fitted out with a wide variety of software enables us to teach not only vocational sound skills, but advanced computer music concepts as well. The studio setups allow us, while adhering to the VET (vocational education and training) syllabi of the TAFE courses, to also move beyond them, giving students professional experience at the cutting edge of developments in music technology.
